| What are we going to cover today?

- Common housing issues in rural areas
- Strategies to address housing issues in rural areas
- A few stories from elsewhere

A rural landscape featuring a field of tall green grass in the foreground, a line of trees in the middle ground, and a blue sky with light clouds in the background. A semi-transparent blue and green gradient overlay covers the middle and bottom portions of the image, serving as a background for the text.

CONTEXT.

**Common housing issues and strategies
in rural areas.**

Rural communities and electoral areas experience many of the **same housing issues** that we observe in urban communities. They typically have **less resources, capacity or tools** to address these challenges.

| Context

- Demonstrating housing needs, gaps and issues can be done in rural communities including electoral areas even with limited data
- A common challenge is moving beyond a research study and towards a tangible, viable housing project due to many contextual factors: economy, capacity, costs, etc.

| Common Issues: Aging Population

- Stay, and age-in-place
 - Aging households remain within their homes as long as they can live independently
 - Adapt homes to meet lifestyle needs and health changes
 - Rural areas often have limited capacity and resources to support seniors aging in place
 - Distance to **healthcare infrastructure** is a factor
- Leave, sell and downsize
 - Few or no options for age-friendly, accessible housing options
 - Can **get "stuck"** / can't sell rural homes if no buyers

| Common Issues: Resource-based Communities

- BC's resource based communities are **subject to market fluctuations** and market commodity price changes
- **Booms:** major economic investment -> land speculation / assembly, absorption, lower vacancy, increasing prices, out-of-towners block book motels / temporary accommodation, capacity issues to manage change
- **Busts:** curtailments, closures, decline -> deferred housing maintenance, deteriorating housing stock, risk of underwater mortgages, no buyers for sellers (e.g. "stuck seniors"), capacity issues to manage change

| Common Issues: Proximity

- Density, servicing, land use
- Transportation
- Support services
- Healthcare infrastructure
- Construction costs (e.g. getting trades and material to site)
- Willing and able partners, funders and operators
- The default is to concentrate affordable housing in more urbanized areas to be in close proximity of services

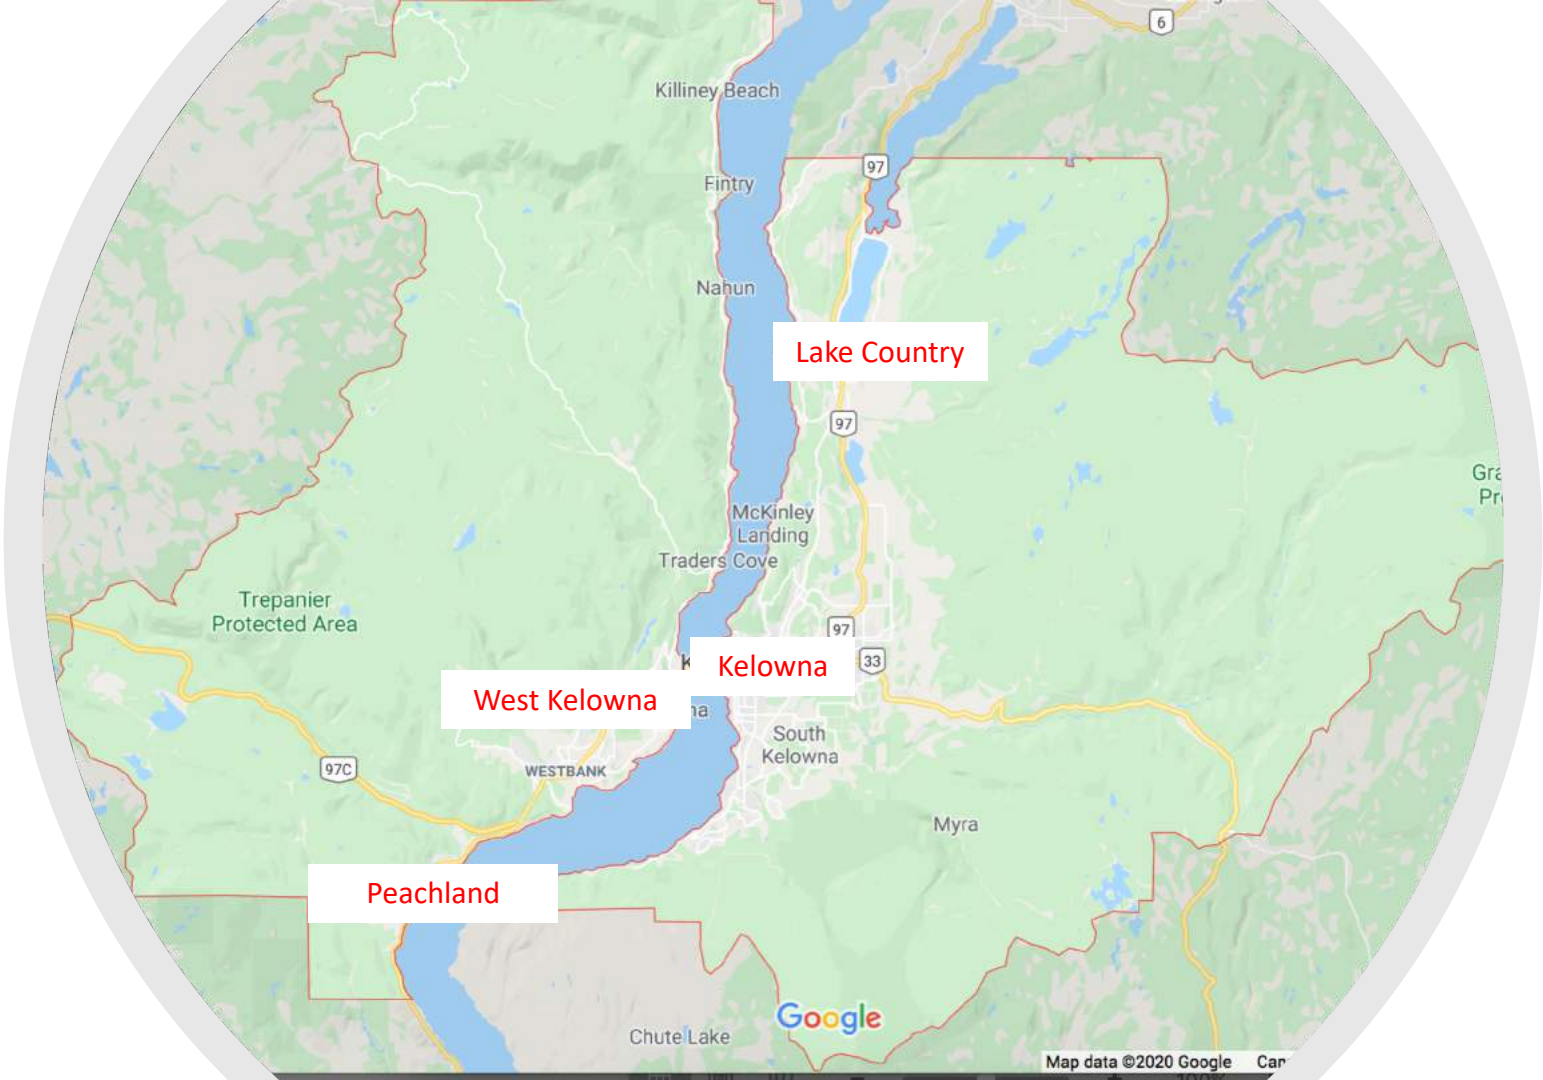

| Common Strategies

- Needs Assessments, Policies, Strategies, Action Plans (especially land use planning such as Regional Growth Strategies, allocating future residential growth and development)
 - Need to demonstrate evidence and business case (site-specific feasibility studies, business plan, proforma -> affordability of units)
- Partnerships
- Linking into other programs (like healthcare)
- Repurposing buildings and structures
- Cluster development

| RDCO: Example Planning Process

- Regional Housing Needs Assessment (2019)
- Strong focus on integrating regional transportation planning and regional housing planning

| RDCO: Example Planning Process

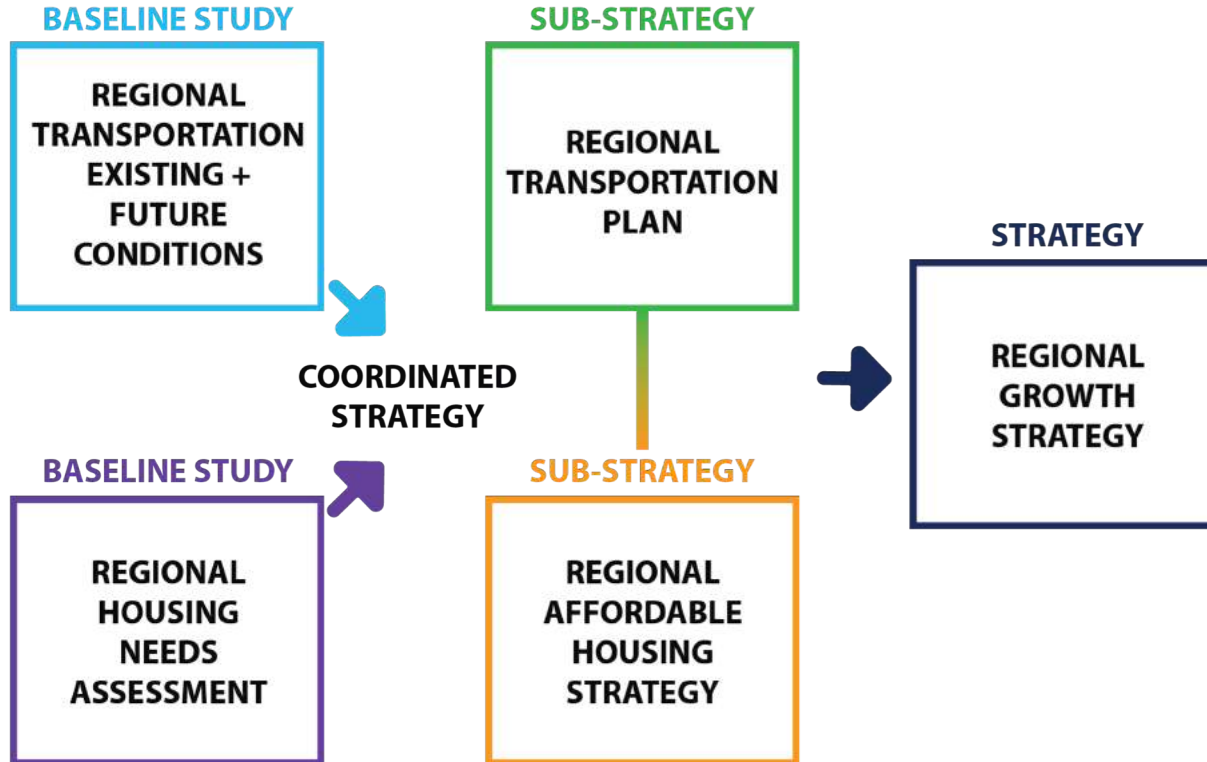

- RDCO is one of the fastest growing regions in the province, expecting ~ 60,000 more people by the year 2036
- Unintended consequences of growth – lack of suitable, affordable housing for workforce, family, seniors, and low-income households

| RDCO: Example Planning Process

- The conundrum for the region is the approach to managing growth.
- Concentrating housing in the core employment area (City of Kelowna) can support a regional centre, leveraging land economics to create mixed-use, walkable streets and neighbourhoods, concentrate growth with existing infrastructure.
- However, market rental and homeownership prices are often more affordable outside the core, and are more aligned with the median income level of the local population.

| The Crossing (the original)

- Opened in 2009, BC's first long-term residential treatment facility to support youth (ages 17 to 24) challenged by addictions
- Conversion and addition of new buildings to create a 42-bed facility at a former adventure ranch - located on a 58-acre site the Similkameen Valley
- Capital cost: \$6.5 million
- Construction included new classrooms, renovation and conversion of bedrooms, activity rooms, kitchen/dining and garden. Installation of fully independent water supply, sewage treatment and a reservoir and sprinkler system for fire fighting

Keremeos

The Cross at Keremeos

The Cross at Keremeos

Informational signs on the balcony railing.

| The Crossing

- Central City Foundation (capital cost/fundraising)
- 3 Health Authorities signed an agreement:
 - Interior Health
 - Fraser Health
 - Vancouver Coastal Health
- CitySpaces (project managers)

| The Crossing reopened as Ashnola

- Closed in 2015, reopened as Ashnola at the Crossing in 2017 with new non-profit operator
- Operates through partnerships (Central City Foundation, BC Mental Health and Substance Use Services, Pacific Community Resource Society)

| The Crossing - Key Takeaways

- Repurposing existing structures in rural areas
- Partnerships that extend beyond jurisdictional boundaries
- Housing project was grounded in need and fits the context of the site and rural nature of area

Recap.

| Recap

- Rural areas experience many of the same housing issues observed in urban communities, but they have less resources/capacity/tools to address them
- Default is to concentrate affordable housing in more urbanized areas to be in close proximity of services
- Attracting interest and investment to rural housing development can be supported by regional planning efforts, feasibility studies, and making strategic decisions / strategic partnerships to ensure a housing proposal will meet the need while maintaining long-term sustainability (e.g. sustainable operations, financial sustainability)

THANK YOU.
